Introduction to DEVASC

“DevNet professional, DEVASC and Automation skills Required”

Exam Blueprint

<https://learningnetwork.cisco.com>

200-901 DEVASC Exam: DevNet Associate

Exam Description

The DevNet Associate Exam v1.0 (DEVASC 200-901) exam is a 120-minute exam associated with the Cisco Certified DevNet Associate certification. This exam tests a candidate's knowledge of software development and design including understanding and using APIs, Cisco platforms and development, application development and security, and infrastructure and automation. The course, Developing Applications and Automating Workflows Using Cisco Core Platforms, helps candidates to prepare for this exam.

The following topics are general guidelines for the content likely to be included on the exam. However, other related topics may also appear on any specific delivery of the exam. To better reflect the contents of the exam and for clarity purposes, the guidelines below may change at any time without notice.

Download Complete List of Topics in PDF format

1.0 Software Development and Design	15%	▾
2.0 Understanding and Using APIs	20%	▾
3.0 Cisco Platforms and Development	15%	▾
4.0 Application Deployment and Security	15%	▾
5.0 Infrastructure and Automation	20%	▾
6.0 Network Fundamentals	15%	▾

Interpret the Blueprint:

DevNet Associate (200-901)

Domain

Domain
Weight

4.0 Application Development and Security

15%

Task

4.1 **Describe** benefits of edge computing

4.2 **Identify** attributes of different application deployment models (private cloud, public cloud, hybrid cloud, and edge)

4.3 Identify the attributes of these application deployment types

Subtask

4.3.a Virtual machines

4.3.b Bare metal

Blueprint Verbs

Describe/Explain

Compare

Construct/Utilize/Apply/Interpret

Troubleshoot/Identify

Depth of Knowledge

Types of questions

Multiple choice

Drag and drop

Fill in the blanks

Meraki in DEVASC

<https://learningnetwork.cisco.com>

• @Describe Level

- Overview of the Cisco Meraki platform
- How to authenticate and authorize API requests to Cisco Meraki
- Examples of API requests and responses using Postman

• @Construct Level

- Build deployment using APIs
- Automate deployment
- **Simplify with Action Batches**

- 3.1 Construct a Python script that uses a Cisco SDK given SDK documentation
- 3.2 Describe the capabilities of Cisco network management platforms and APIs (Meraki, Cisco DNA Center, ACI, Cisco SD-WAN, and NSO)
- 3.3 Describe the capabilities of Cisco compute management platforms and APIs (UCS Manager, UCS Director, and Intersight)
- 3.4 Describe the capabilities of Cisco collaboration platforms and APIs (Webex Teams, Webex devices, Cisco Unified Communication Manager including AXL and UDS interfaces, and Finesse)
- 3.5 Describe the capabilities of Cisco security platforms and APIs (Firepower, Umbrella, AMP, ISE, and ThreatGrid)
- 3.6 Describe the device level APIs and dynamic interfaces for IOS XE and NX-OS
- 3.7 Identify the appropriate DevNet resource for a given scenario (Sandbox, Code Exchange, support, forums, Learning Labs, and API documentation)
- 3.8 Apply concepts of model driven programmability (YANG, RESTCONF, and NETCONF) in a Cisco environment
- 3.9 Construct code to perform a specific operation based on a set of requirements and given API reference documentation such as these:
 - 3.9.a Obtain a list of network devices by using Meraki, Cisco DNA Center, ACI, Cisco SD-WAN, or NSO
 - 3.9.b Manage spaces, participants, and messages in Webex Teams
 - 3.9.c Obtain a list of clients / hosts seen on a network using Meraki or Cisco DNA Center

Use Case

Meraki Headless Deployment

- [Fris.co](#) Inc., Devvie's company, is rapidly expanding its AI-run operations across multiple locations worldwide.
- A new site has been set up, and a human has been hired to unbox and connect the Meraki devices.
- Devvie's primary responsibility is to automate the site's creation, deploy newly added devices, and configure them while ensuring device connectivity.

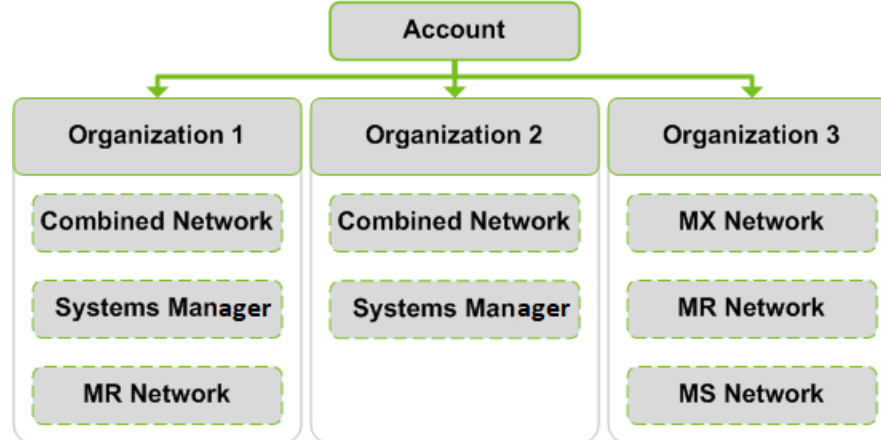

Dissecting our Use Case

1. Understand Meraki Dashboard Organization Hierarchy

- **Organizations** contain **Networks** (Wireless, Switch, Security, Camera, Combined)
- **Networks** contain **Devices** (Switches, APs, Cameras)

Dissecting our Use Case

2. Identify the Meraki Dashboard APIs Endpoint

API	Endpoint
Authenticate	Dashboard Token
Create Organization	POST /api/v1/organizations
Claim Into Organization	POST /api/v1/organizations/{organizationId}/claim
Create Organization Network	POST /api/v1/organizations/{organizationId}/networks
Claim Network Devices	POST /api/v1/networks/{networkId}/devices/claim
Configure Devices	POST Multiple Endpoints

Journey to DEVASC

API

Authenticate

Create Organization

POST /api/v1/organizations

Claim Into Organization

POST
/api/v1/organizations/{organizationId}/claim

Create Organization Network

POST
/api/v1/organizations/{organizationId}/networks

Configuration

POST Multiple Endpoints

- 2.7 Utilize common API authentication mechanisms: basic, custom token, and API keys
- 2.6 Identify the parts of an HTTP response (response code, headers, body)
- 3.2 Describe the capabilities of Cisco network management platforms and APIs (Meraki, Cisco DNA Center, ACI, Cisco SD-WAN, and NSO)
- 3.9 Construct code to perform a specific operation based on a set of requirements and given API reference documentation such as these:
 - 3.9.a Obtain a list of network devices by using Meraki, Cisco DNA Center, ACI, Cisco SD-WAN, or NSO
 - 3.9.b Manage spaces, participants, and messages in Webex Teams
 - 3.9.c Obtain a list of clients / hosts seen on a network using Meraki or Cisco DNA Center

Discover the Meraki Dashboard APIs

Authenticate

Enable API Access

For access to the API, first enable the API for your organization under **Organization > Settings > Dashboard API access**.

Dashboard API access

API Access ⓘ

☒ Enable access to the Cisco Meraki Dashboard API

After enabling the API, go to the **my profile** page to generate an API key. This API key will be associated with the Dashboard Administrator account which generates it, and will inherit the same permissions as that account. You can generate, revoke, and regenerate your API key on your profile.

Note: Keep your API key safe as it provides authentication to all of your organizations with the API enabled. Dashboard does not store API keys in plaintext for security reasons, so this is the only time you will be able to record it. If you lose or forget your API key, you will have to revoke it and generate a new one.

API access

API key

Generate API key

• Header

- Using **Token**
- Key **"X-Cisco-Meraki-API-Key"**
- Value **"{API Token}"**

Create Organization

POST Create A New Organization

```
https://api.meraki.com/api/v1/organizations
```

Create a new organization

Body Parameters

Parameter	Type	Description
name	string	The name of the organization
management	object	Information about the organization's management system

AUTHORIZATION API Key

This request is using API Key from collection [Meraki Dashboard API - v1.33.0](#)

HEADERS

X-Cisco-Meraki-API-Key

Content-Type

application/json

Claim Into Organization

POST Claim A List Of Devices Licenses And Or Orders Into An Organization

```
https://api.meraki.com/api/v1/organizations/:organizationId/claim
```

Claim a list of devices, licenses, and/or orders into an organization. When claiming by order, all devices and licenses in the order will be claimed; licenses will be added to the organization and devices will be placed in the organization's inventory.

AUTHORIZATION API Key

This request is using API Key from collection [Meraki Dashboard API - v1.33.0](#)

HEADERS

  ]  
}
```

Claim Network Devices

POST Create A Network

`https://api.meraki.com/api/v1/organizations/:organizationId/networks`

Create a network

Body Parameters

Parameter	Type	Description
name	string	The name of the new network
productTypes	array	The product type(s) of the new network. If more than one type is included, the network will be a combined network.
tags	array	A list of tags to be applied to the network
timeZone	string	The timezone of the network. For a list of allowed timezones, please see the 'TZ' column in the table in this article .
copyFromNetworkId	string	The ID of the network to copy configuration from. Other provided parameters will override the copied configuration, except type which must match this network's type exactly.
notes	string	Add any notes or additional information about this network here.

JSON Body

```
{  
  "name": "Main Office",  
  "productTypes": [  
    "appliance",  
    "switch",  
    "wireless"  
  ],  
  "timeZone": "America/Los_Angeles",  
  "notes": "office network, restricted to humans"  
}
```

Configure our new site

POST Create A New Dashboard Administrator

```
https://api.meraki.com/api/v1/organizations/:organizationId/admins
```

PUT Update A Switch Port

```
https://api.meraki.com/api/v1/devices/:serial/switch/ports/:portId
```

PUT Update The Attributes Of An MR SSID

```
https://api.meraki.com/api/v1/networks/:networkId/wireless/ssids/:number
```

Update the attributes of an MR SSID

What are we going to do?

- **Postman**
 - Build the use case using Postman
 - Interact with the APIs and see results
 - Learn how to use Postman (DEVASC)
- **Code**
 - Walkthrough Python Code
 - Interact with APIs using Requests (DEVASC)
 - Leverage Python SDK (DEVASC)

Let's build it!

Meraki Action Batches

Efficient Network Deployment

- Imagine [Fris.co](https://fris.co) had to deploy:
 - 10k Security Appliances
 - 50k Access Points
 - 50K camera
 - 15K Switches

125K Devices total

6 Organization

12 Network Admins

- ~10 API calls per device
 - @125K Devices
 - 1.25M API calls total

Action Batches

To the rescue!

- Condense 100 API requests into one action batch
- Batches can be run asynchronously and in parallel
- Each batch is atomic (all or nothing, no partial success)
- API-only feature! (Yay, DEVASC)

Creating an Action Batch

- **POST** request containing an array of resources

PARAMETERS

Parameter	Description
confirmed	Set to true for immediate execution. Set to false if the action should be previewed before executing.
synchronous	Force the batch to run synchronous. There can be at most 20 actions in synchronous batch.
actions	A set of changes to make as part of this action
resource	Unique identifier for the resource to be acted on
operation	The operation to be run on the resource, such as " create ", " update ", " destroy ", etc
body	The body of the action. Example: <code>{"tags": tags, "type": "access", "vlan": vlan}</code>
