

The bridge to possible

Terraform: ThousandEyes on Catalyst 9000 Switches

Robert Csapo, Product Manager – Catalyst 9000 Switching
@robertcsapo

Cisco Webex App

Questions?

Use Cisco Webex App to chat with the speaker after the session

How

- 1 Find this session in the Cisco Live Mobile App
- 2 Click “Join the Discussion”
- 3 Install the Webex App or go directly to the Webex space
- 4 Enter messages/questions in the Webex space

Webex spaces will be moderated until February 24, 2023.

Agenda

- Infrastructure as Code
- Application Hosting on Catalyst 9000
- ThousandEyes
- Terraform
- Deploy ThousandEyes on Catalyst 9000

ROBERT CSAPO

- ❖ Product Manager for Catalyst 9000 Core Switches
- ❖ Almost 10 years at Cisco
- ❖ Cisco Certified: DevNet Associate/Professional
- ❖ Father and Husband
- ❖ From Stockholm, Sweden

Applications live in a multicloud and distributed world

Devices and things

Mobile users

Campus and branch users

Infrastructure as Code (IAC)

Help to reduce Cost, increase Speed, and minimize Risk

User

Infrastructure

Platforms

Application Hosting on Catalyst 9000

Enables hosting docker containers and third-party apps

x86 CPU

Linux-based OS

Memory/Storage

Network Visibility for the Applications

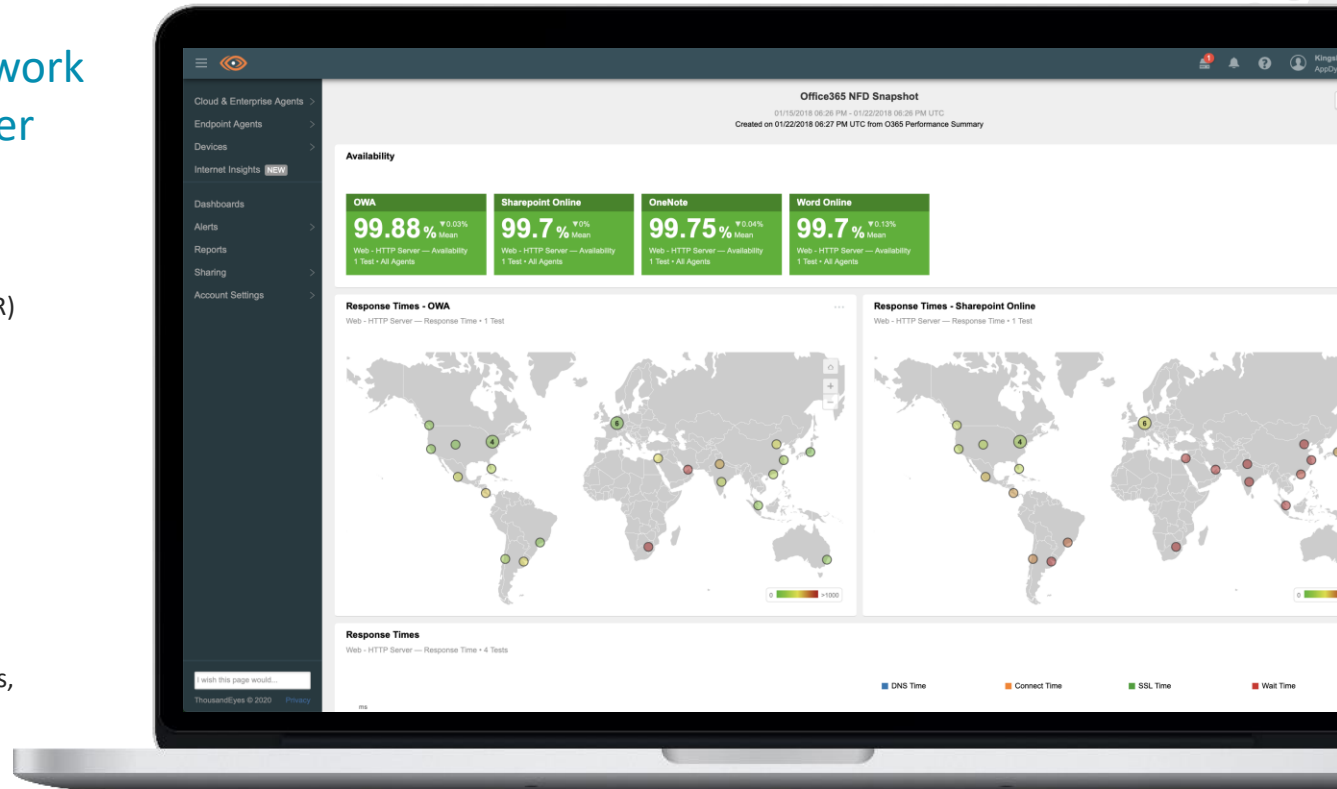

Cisco ThousandEyes

Proactively diagnose network issues that affect customer experience

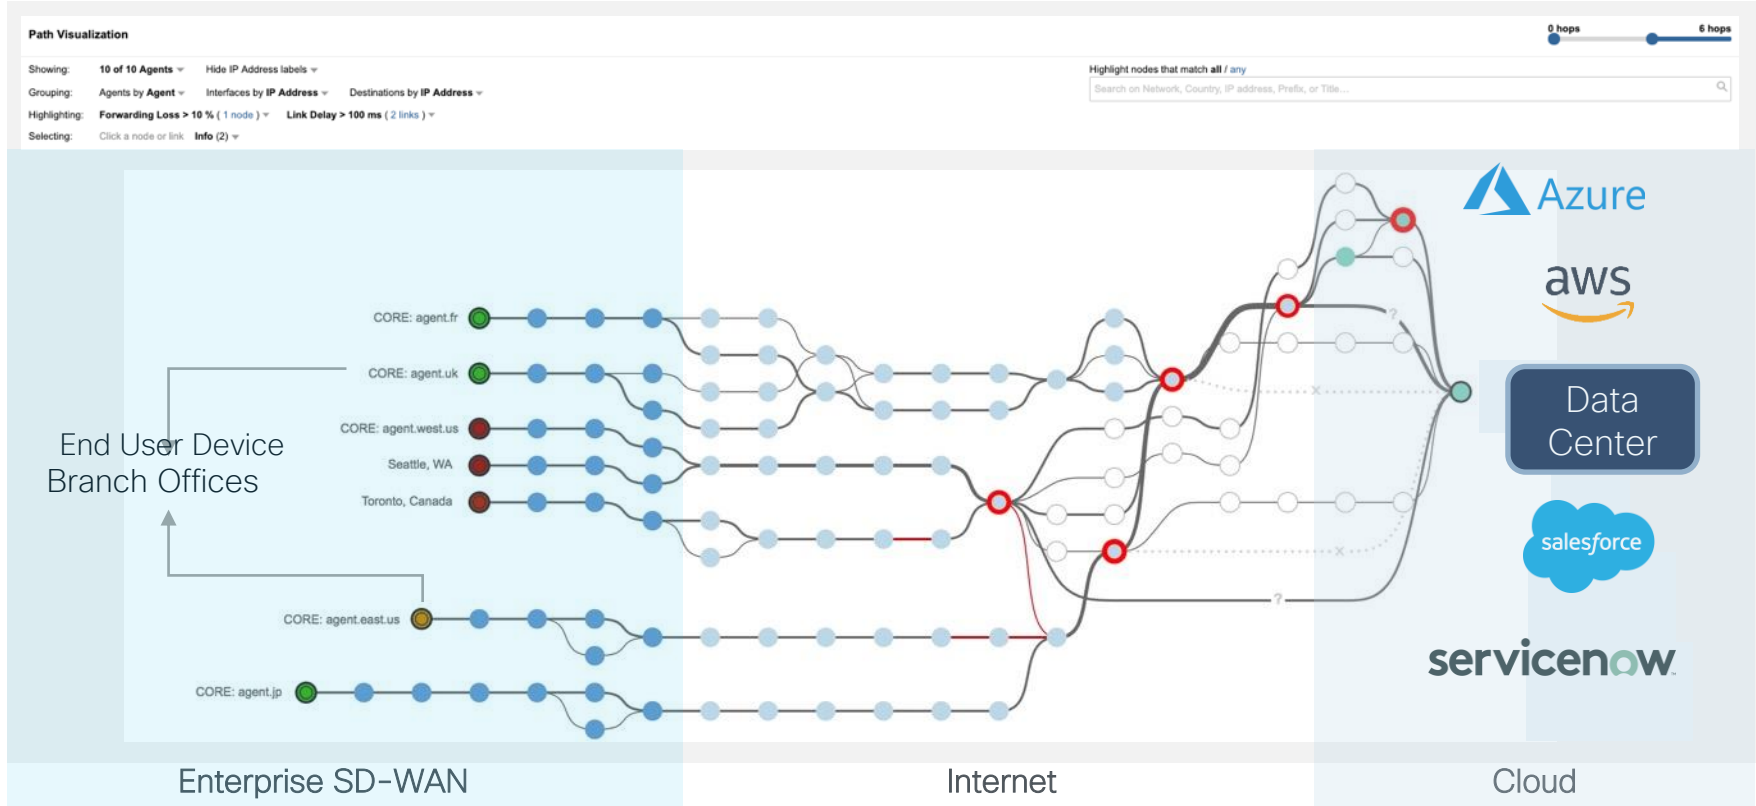

Extending Root Cause Analysis (MTTI/MTTR) for network & internet related problems

Extending our coverage and root cause analysis for Enterprise Collaboration and Productivity SaaS Applications

Monitor & troubleshoot connectivity and network performance to IaaS, PaaS services, whilst understanding 3rd party service dependencies

Public Internet – no longer a black box

What is ThousandEyes?

ThousandEyes is a Digital Experience Monitoring SaaS platform to see, understand, and improve digital experiences of customers and employees over any network. We offer a distribution of global vantage points from where users can run a variety of tests.

Cloud Agent

Globally distributed agents installed and managed by ThousandEyes in 200+ cities.

External Vantage Points

Enterprise Agent

Lightweight software-based agents, easily installed on your own network, provide visibility from within the enterprise campus, data centers, cloud VPCs/VNets, and branches.

Supports active monitoring, SNMP-based monitoring, and topological mapping of internal network devices.

Enterprise Agent is applicable to Enterprise Switching Infra

Internal Vantage Points

Endpoint Agent

Lightweight service installed on end-user laptops and desktops that provides proactive and real-time monitoring of application experience and network connectivity

End-User Experience

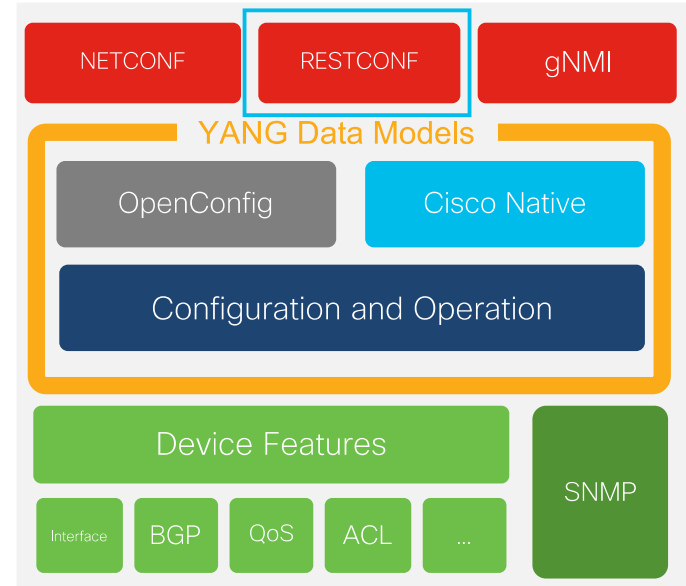

Terraform is...

Open-source Infrastructure as Code (IaC) Software Tool providing a consistent CLI workflow to manage hundreds of cloud services. Terraform codifies cloud APIs into declarative configuration files.

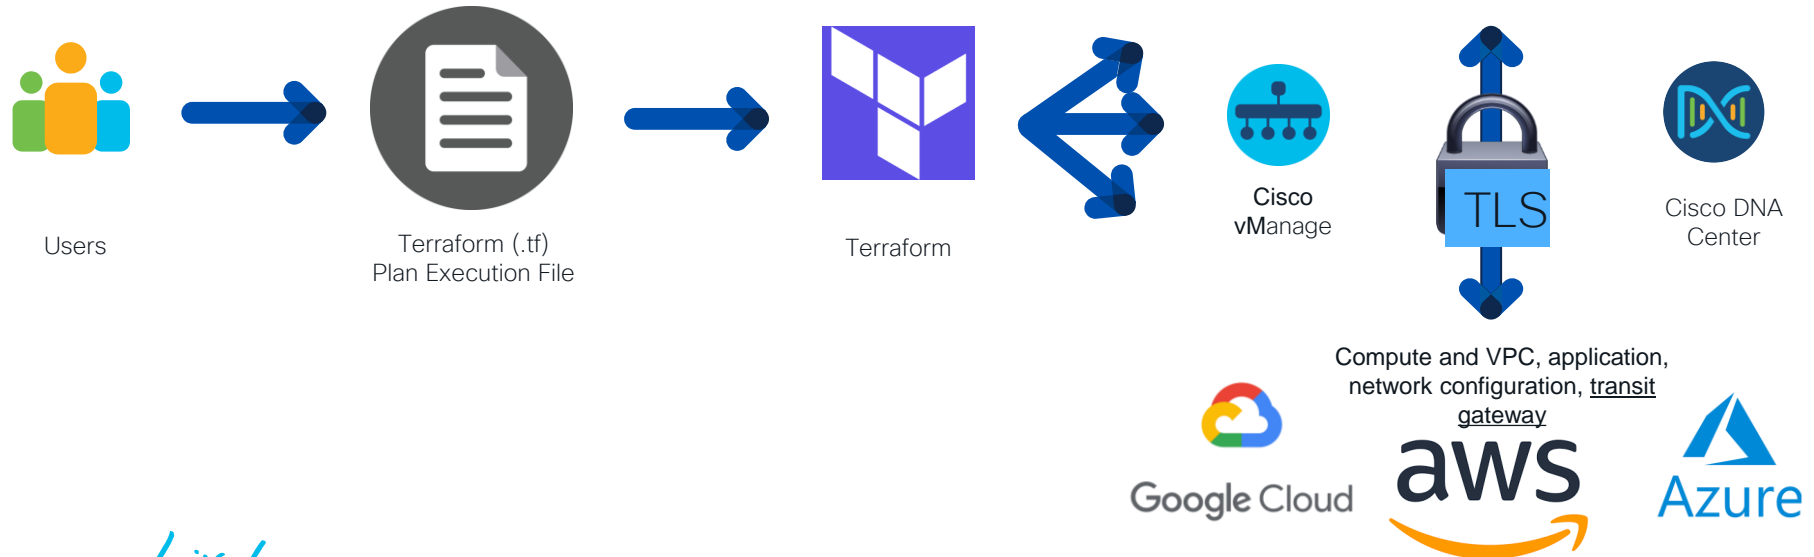

- Cloud Native Tooling circa 2014 from HashiCorp
- Agentless, single binary file
- Zero server-side dependencies

Terraform uses the RESTCONF API

Why Terraform with Catalyst 9000 Switches?

Terraform is a single tool that is used to configure networks and applications
Now support for Terraform with IOS XE is being introduced

Terraform with Cisco Application Hosting

```
terraform {  
  required_providers {  
    ciscoapphosting = {  
      source = "robertcsapo/ciscoapphosting"  
      version = "1.0.0"  
    }  
  }  
}
```

Terraform Registry

GitHub Examples

```
resource "ciscoapphosting_app" "app" {  
  host          = var.hosts.0  
  image         = "https://example.tld/file.tar"  
  app_gigabit_ethernet = "1/0/1"  
  vlan_trunk    = false  
  vlan         = 1  
  env = {  
    TOKEN = "example"  
  }  
}
```

Terraform CLI

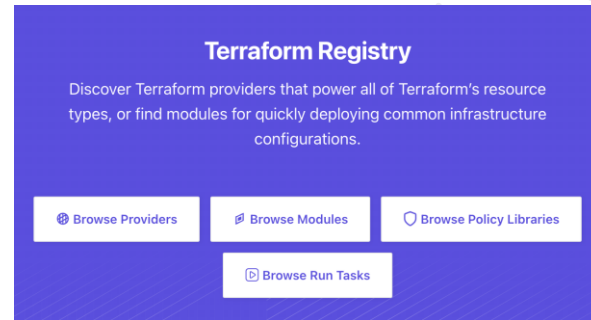

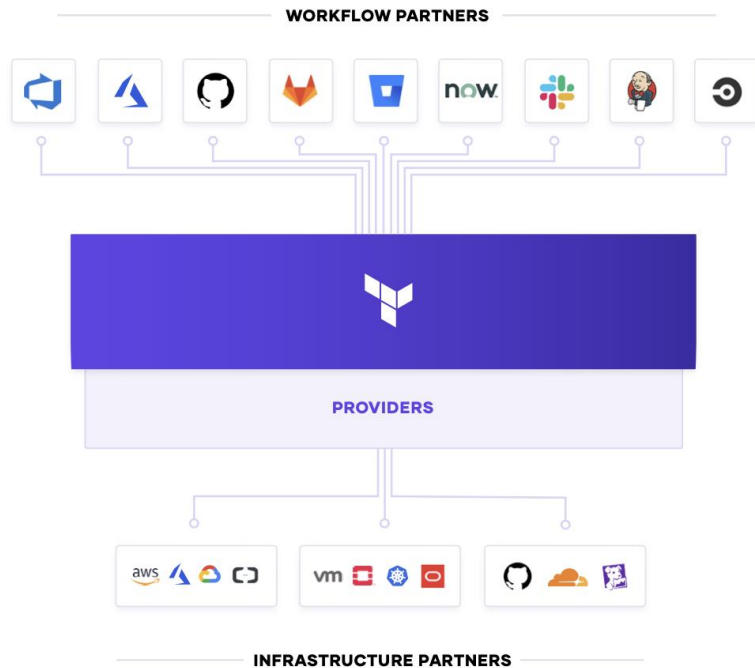

Plan

Apply

Terraform with multiple providers

End-to-End deployment with Cisco ThousandEyes

Getting started with Terraform

Install Terraform

macOS

```
brew tap hashicorp/tap  
brew install hashicorp/tap/terraform
```

CentOS/RHEL

```
sudo yum install -y yum-utils  
sudo yum-config-manager --add-repo  
https://rpm.releases.hashicorp.com/RHEL/hashicorp.repo  
sudo yum -y install terraform
```

Windows

```
choco install terraform
```

More details <https://developer.hashicorp.com/terraform/downloads>

Code in Terraform language

```
terraform {  
  required_providers {  
    ciscoapphosting = {  
      source = "robertcsapo/ciscoapphosting"  
      version = "1.0.0"  
    }  
  }  
}
```

Terraform Provider

Download from the Terraform Public Registry

```
provider "ciscoapphosting" {  
  username = var.username  
  password = var.password  
  insecure = var.insecure  
  timeout  = var.timeout  
}
```

Terraform Provider Settings

Cisco IOS XE RESTCONF

```
locals {  
  te_agent_token = "thousandeyes_agent_token"  
}
```

Terraform Variables

```
resource "ciscoapphosting_app" "app" {  
  host          = var.hosts.0  
  image         = "https://downloads.thousandeyes.com/enterprise-agent/thousandeyes-enterprise-agent-4.2.2.cisco.tar"  
  app_gigabit_ethernet = "1/0/1"  
  vlan_trunk    = false  
  vlan         = 1  
  env = {  
    TEAGENT_ACCOUNT_TOKEN = local.te_agent_token  
  }  
}
```

Application Settings

Initialize Terraform

The folder with all the .tf files

```
~/terraform-provider-ciscoapphosting/examples/thousandeyes# ls -all
total 28
drwxr-xr-x 3 root root 4096 Dec 19 17:26 .
drwxr-xr-x 8 root root 4096 Dec 19 17:26 ..
drwxr-xr-x 3 root root 4096 Dec 19 17:26 .terraform
-rw-r--r-- 1 root root 3510 Dec 19 17:26 .terraform.lock.hcl
-rw-r--r-- 1 root root 1517 Dec 19 17:26 main.tf
-rw-r--r-- 1 root root 27 Dec 19 17:26 terraform.tfvars
-rw-r--r-- 1 root root 537 Dec 19 17:26 variables.tf
```

```
$ terraform init
```

```
# terraform init
```

```
Initializing the backend...
```

```
Initializing provider plugins...
```

- Installing thousandeyes/thousandeyes v1.0.0-beta...
- Installed thousandeyes/thousandeyes v1.0.0-beta (self-signed, key ID 02BB91CE566497C7)

Partner and community providers are signed by their developers.

If you'd like to know more about provider signing, you can read about it here:
<https://www.terraform.io/docs/cli/plugins/signing.html>

Terraform has created a lock file `.terraform.lock.hcl` to record the provider selections it made above. Include this file in your version control repository so that Terraform can guarantee to make the same selections by default when you run "terraform init" in the future.

Terraform has been successfully initialized!

You may now begin working with Terraform. Try running "terraform plan" to see any changes that are required for your infrastructure. All Terraform commands should now work.

If you ever set or change modules or backend configuration for Terraform, rerun this command to reinitialize your working directory. If you forget, other commands will detect it and remind you to do so if necessary.

Deploy ThousandEyes Agent on Catalyst 9000 switches

Prerequisites for Terraform

With Catalyst 9000 and ThousandEyes

✓ Catalyst 9000 Switching Series

Catalyst 9300/9400

✓ Cisco IOS XE 17.8.1+

RESTCONF enabled

✓ Cisco DNA Advantage

Application Hosting

ThousandEyes Agent

✓ Cisco ThousandEyes

Activate the Dashboard

✓ Enterprise Agents

Account Token

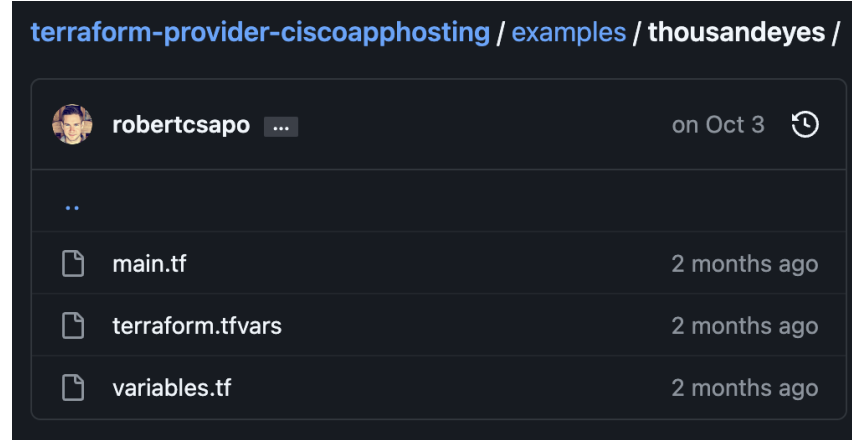

✓ Internet Access

HTTPS access

Download the examples from Github

Application Monitoring

Network Visibility using Cisco Catalyst 9000 and Cisco ThousandEyes

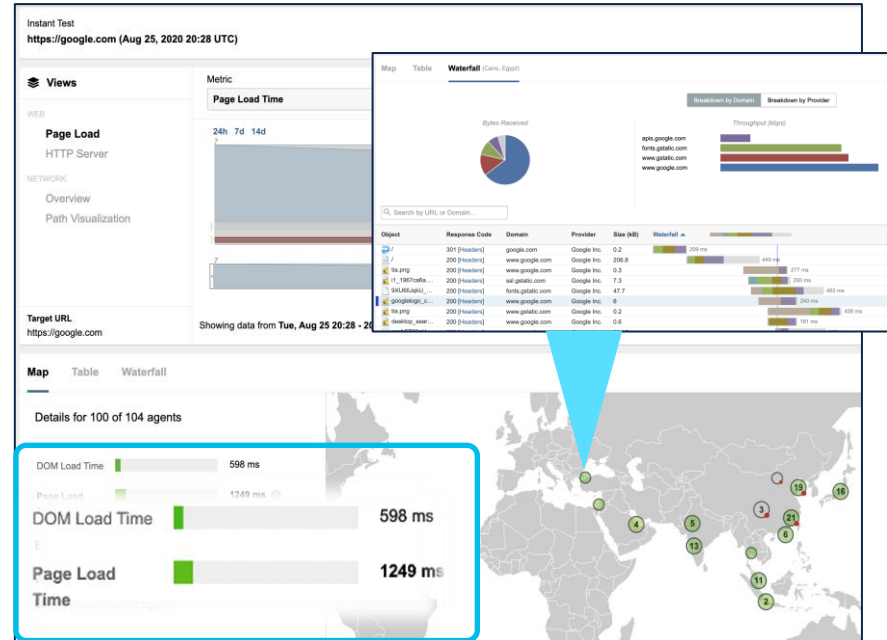

Web performance monitoring

Web tests: HTTP, page load, transaction

- Monitor and validate web applications' usability and performance, including SaaS and internally-hosted apps
- **HTTP Server Test**
 - Measure availability, response time and throughput of an HTTP service
- **Page Load Tests**
 - Measure page load times of individual web components using **waterfall analysis**
- **Transaction Tests**
 - Monitor application usability by emulating user journey through an app with multi-step transactions scripts
 - Validate third-party API performance and application logic of complex workflows

Page load test view

Demo

Demo: Terraform Cloud – ThousandEyes– Catalyst 9000

The image is a collage of three screenshots demonstrating the integration of ThousandEyes and Terraform Cloud.

The top-left screenshot shows the ThousandEyes 'Cloud & Enterprise Agents' settings page. It indicates that two new Enterprise Agents have been added: 'evpn-leaf2' and 'evpn-leaf1'. The page also shows a search bar for agents and a table with columns for Agent Name, Hostname, Utilization, and Status. Below the table, it states 'No Enterprise Agents Found'.

The top-right screenshot shows the ThousandEyes 'Dashboards' page. It displays an 'Alert List' section with a '1 hour' filter and a 'No Alert Activity' message. Below this is an 'Agent Status' section showing 'Live status' and 'No Enterprise Agents'.

The bottom screenshot shows a terminal window with a shell prompt and a Terraform Cloud workspace configuration page. The terminal window shows the user 'rcsapo' at 'ip-100-125-252-92' in the directory '~/terraform/thousandeyes'. The Terraform Cloud page shows an 'Example code' block with the following Terraform configuration:

```
terraform {
  cloud {
    organization = "devnet-1458"

    workspaces {
      name = "cl1"
    }
  }
}
```

The page also shows a 'Tags (0)' section with an 'Add a tag' button and a 'Run triggers' section with a 'No source workspaces have been selected' message. The bottom of the page shows 'Resources 0' and 'Outputs 0'.
