Cisco Webex Teams

Questions?

Use Cisco Webex Teams to chat with the speaker after the session

How

- 1 Find this session in the Cisco Events Mobile App
- 2 Click “Join the Discussion”
- 3 Install Webex Teams or go directly to the team space
- 4 Enter messages/questions in the team space

Agenda

- Challenges In A Modern Data Center
- A Solution
- A NetOps Approach
- A Use Case
- Conclusion

Year 1909

Year 2020

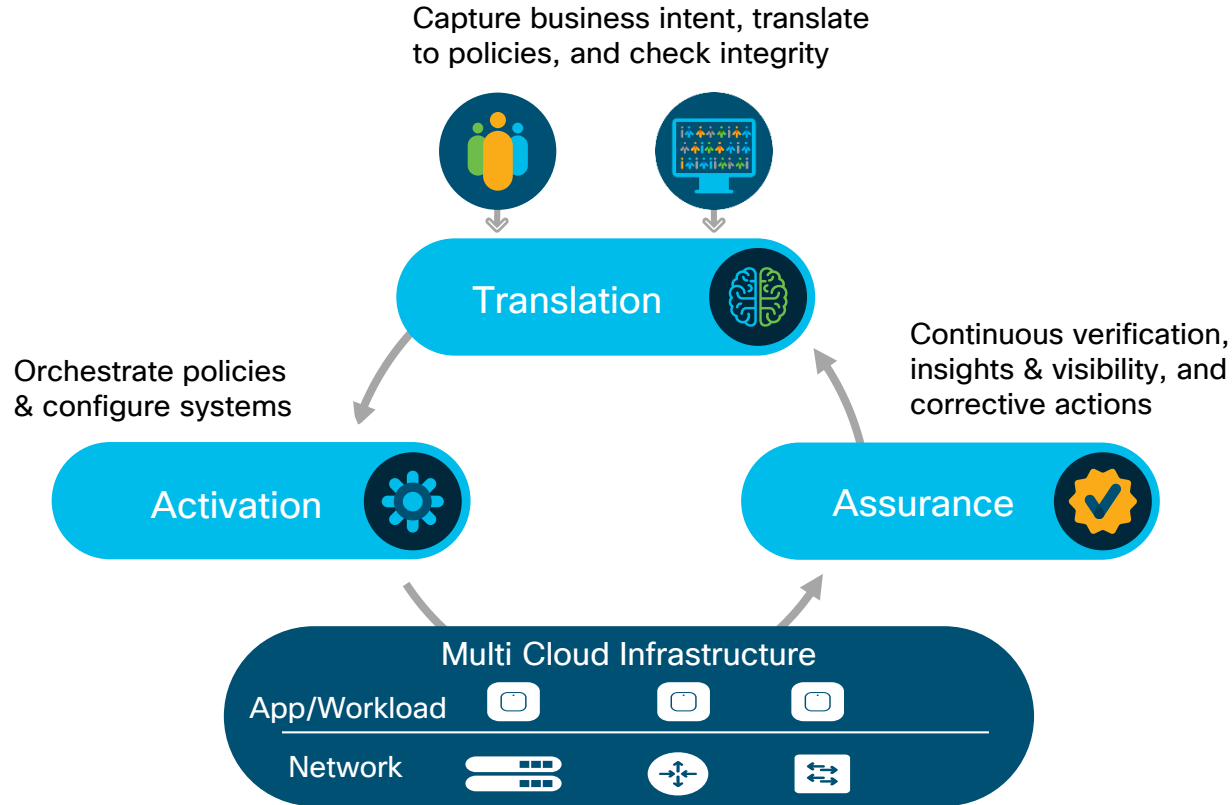

Year 1983

Can you reach the Mainframe ?

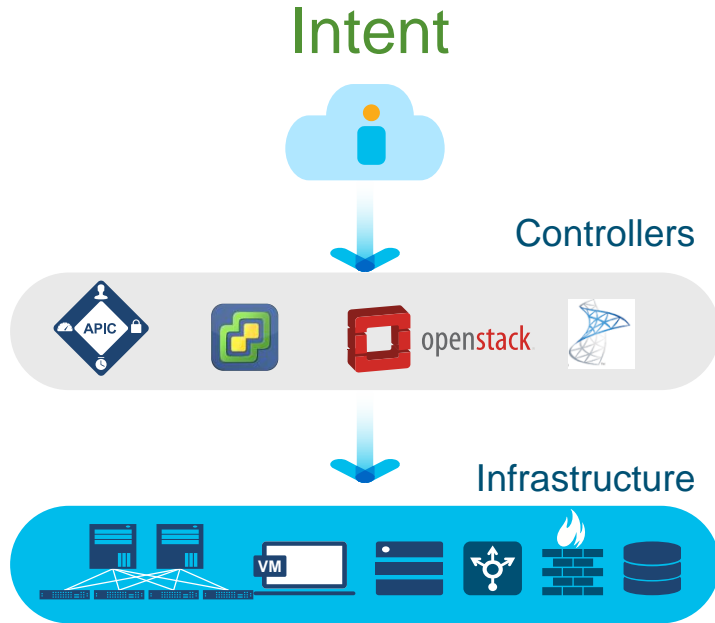

Year 2019

Can you Ping the IP of the Server ?

Intent-Based Networking in the Datacenter

Infrastructure Provisioning has Evolved with Mature Orchestration Engines

Automated, Agile

Highly Scalable

Policy Based

Virtualized

NAE Overview

Problem: DC Paradigms Are Fundamentally Reactive

Intent Frequently Breaks ...

We Always React ...

Leaving Us With ...

Operational

Troubleshoot

Security

Scramble to fix it

Compliance

Fail audits

Change

Undo change

**An Inability to
Assure Intent
Proactively.**

We are always in a
reactive mode!

Intent Assurance

The confidence that the
infrastructure is doing what
you intended it to do

Intent Encompasses Data Center Operations

Configs, Changes, Routing, VMs, Security, ... Compliance, Audits

Network Assurance Engine

Precise formal mathematical models
allow you to transform network
operations from re-active to pro-active

Migration | Change Mgmt. | Ongoing Optimization

Network Assurance Engine: How It Works

Data Collection

Captures all non-packet data:
intent, policy, state across
data center network

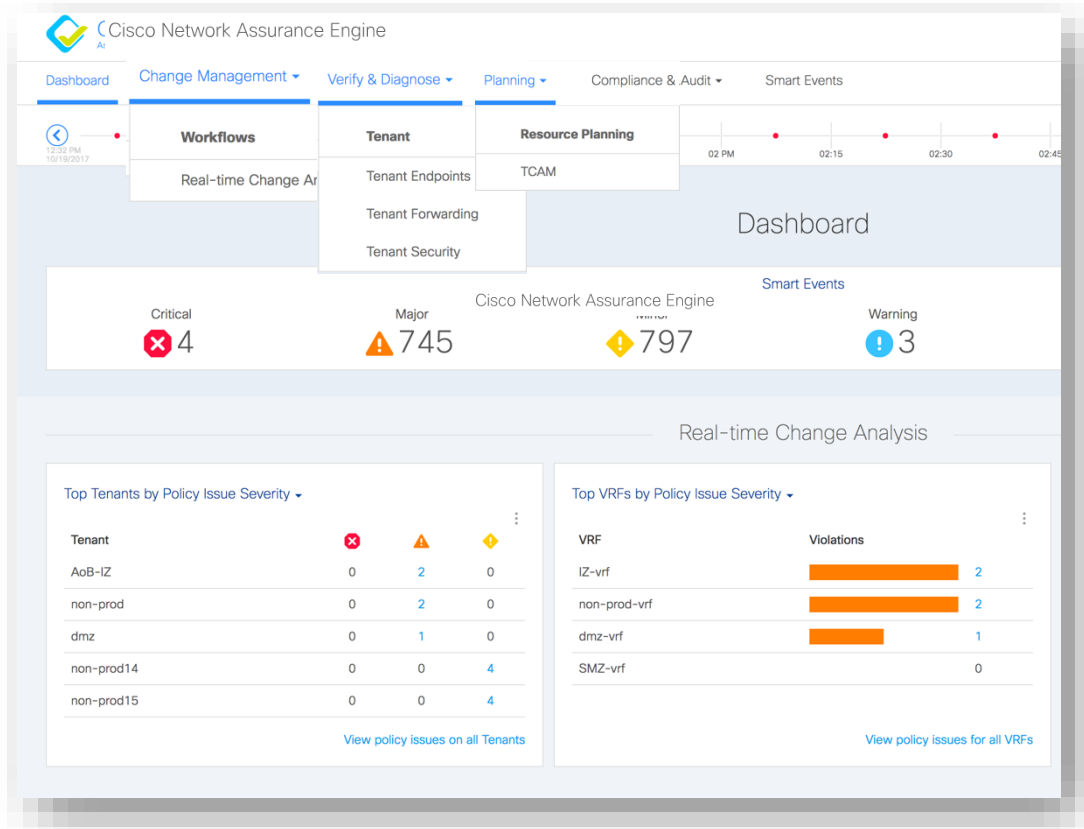

Comprehensive Network Modeling

Mathematically accurate models
spanning underlay, overlay and
virtualization layers

Intelligent Analysis

5000+ domain knowledge-based
error scenarios built-in, codified
remediation steps

Simple GUI with direct access to the information

4 Main Tabs:

- Dashboard (Summary)
- Change Mgmt
- Tenant Diagnose (EP/FW/Sec)
- Planning (HW resources)

Admin Tabs & functions

- Compliance & Audit
- Smart Events

Severity	Event Category	Event Subcategory	Event Name	Count	Event Description
	Filter	Filter	Filter		
✖	TENANT_ENDPOINT	ENDPOINT_LEARNING	FABRIC_EP_LEARNING_ERROR	43	Endpoint information is not consistent across the fabric leafs and spines.
✖	TENANT_SECURITY	VRF_SECURITY	ENFORCED_VRF_POLICY_VIOLATION	8	VRF is in enforced mode. APIC policy for implicit deny log is not enforced on Leaf hardware.
✖	TENANT_ENDPOINT	ENDPOINT_LEARNING	CONNECTED_EP_LEARNING_ERROR	6	Endpoint information is not consistent across the fabric leafs and spines.
✖	SYSTEM	ASSURANCE_CONTROL	UNSUPPORTED_SERVICE_CHAINING_FEATURE_DET...	1	ACI Fabric configuration includes Service insertion. This capability is not supported in the current release of CNAE software.

Driving Operator Confidence

What is wrong ?

Overlapping subnets

Where is the impact?

In VRF 2

What is the fix ?

Specific subnetting

Why is it wrong ?

Subnets learnt from VRF 1

Description	Communication between EPGs across VRFs is failing due to an overlapping subnet address.																														
Impact	Overlapping subnet configuration is causing an intermittent connectivity problem between Provide and Consumer EPGs.																														
Affected Objects	<table><tr><th>VRF's Tenant</th><th>VRF</th><th>Prefix</th></tr><tr><td>overlapErrorsNavRoutingTenant86</td><td>across_vrf_2</td><td>30.30.30.30/32</td></tr></table>							VRF's Tenant	VRF	Prefix	overlapErrorsNavRoutingTenant86	across_vrf_2	30.30.30.30/32																		
VRF's Tenant	VRF	Prefix																													
overlapErrorsNavRoutingTenant86	across_vrf_2	30.30.30.30/32																													
Checks	<table><tr><th>Failing Condition</th><th>Suggested Next Steps</th></tr><tr><td>Provider BD's/EPG's subnets or Consumer BD's/EPG's subnets are not unique across both VRFs.</td><td><ul style="list-style-type: none">Check if Provider and Consumer EPGs are required to communicate with each other using the listed contracts.If connectivity is required, ensure that the Provider EPG's subnet or Consumer EPG's subnet are unique across the VRFs.If connectivity is not required, determine if you can remove the consumer (not the provider) side of the imported contract relationship.</td></tr></table>							Failing Condition	Suggested Next Steps	Provider BD's/EPG's subnets or Consumer BD's/EPG's subnets are not unique across both VRFs.	<ul style="list-style-type: none">Check if Provider and Consumer EPGs are required to communicate with each other using the listed contracts.If connectivity is required, ensure that the Provider EPG's subnet or Consumer EPG's subnet are unique across the VRFs.If connectivity is not required, determine if you can remove the consumer (not the provider) side of the imported contract relationship.

Smart Events with Remedial Steps!

Policy Explorer

Policy Explorer

- Explore the ACI object models and associations
- Verify connectivity and segmentation between network assets
- The Explorer feature is based on natural language query interface. The types of queries supported by the feature include:
 - What Query: Answers how the different ACI networking entities are related to each other.
 - Can Query: Answers whether the entities in the ACI policy can communicate with each other. Can queries can also be used to determine if the entities in the ACI policy can communicate using protocols such as TCP, UDP, or ICMP and the source and destination ports used for communication.
 - How Query: Provides details on the communication between the entities in the ACI policy.
 - View Query: Provides the visual indication of the interface status for any leaf switch in the assurance group.

Ability to Explore your policies

- **Value:** NAE allows to easily analyze the policy space to answer the question:
 - Are all necessary policies against EPG-n correctly configured ?
 - Can EPG-A talk to EPG-B based on policies within my Tenant?
 - Are all the contracts required correctly configured or are there any missing?
 - Do we have consistency among all policies to provide the expected Tenant security?
 - Color coded to easy point out issues

Network Assurance Engine APIs

NAE APIs

- Same objects irrespective of interface
- True REST API targeting “resources”
- Programmatic access to all assurance models
- Fully automatable management of NAE

Demo Time!
Will my Change be
successful?

Pre-Change Analysis

- Pre-change analysis (PCA) allows modelling the intended changes in Cisco NAE, and verify if the changes generate the desired results.
- The Changes can be modelled:
 - On the GUI, in cases where no ACI pre-prod/test environment is present
 - Imported as a JSON/XML file, where an ACI pre-prod/test environment is present
- A Special PCA Epoch Delta is generated to inform the user of potential impacts

Pre-Change Analysis – Result Example

Delta Analysis

Epoch Delta for LeakRoute

Earlier Epoch : 01/20/2020 3:57:41 PM GMT+11

Later Epoch : 01/20/2020 3:57:41 PM GMT+11

Time Range : 0

Feedback

cisco *Live!*

Complete your online session survey

- Please complete your session survey after each session. Your feedback is very important.
- Complete a minimum of 4 session surveys and the Overall Conference survey (starting on Thursday) to receive your Cisco Live t-shirt.
- All surveys can be taken in the Cisco Events Mobile App or by logging in to the Content Catalog on ciscolive.com/emea.

Cisco Live sessions will be available for viewing on demand after the event at ciscolive.com.
