

The bridge to possible

# Using ISE OpenAPI to automate certificate management

Taking some of the friction out of managing ISE

Steven McNutt, Cybersecurity Solutions Engineer

CCIE# 6495

CISCO *Live!*

#CiscoLive

# Cisco Webex App

## Questions?

Use Cisco Webex App to chat with the speaker after the session

## How

- 1 Find this session in the Cisco Live Mobile App
- 2 Click “Join the Discussion”
- 3 Install the Webex App or go directly to the Webex space
- 4 Enter messages/questions in the Webex space

Webex spaces will be moderated by the speaker until June 7, 2024.

# Agenda

- Introduction
- ISE API Primer
- ISE System certificates
- Certificate management API
- Automation use cases
- Enrollment Protocols
- Demo
- Wrap-up

# Introduction

- Certificate management is a core operational task of Identity Services Engine.
- It's also one of the biggest friction points in maintaining an ISE deployment.

- Certificate management tasks are performed manually.
- New APIs provide opportunities to automate these tasks
- Reduces effort and risk

# Assumptions

- Familiar with cryptography basics
- Familiar with PKI basics
- Familiar with ISE
- Some basic python knowledge

Yes, that's a lot of assumptions!

- Happy to answer follow up Qs in the Webex Chat

# ISE API Primer

# ISE API Services

- Pre-ISE 3.1:
  - MNT (Monitoring and Troubleshooting) - ISE 1.0
  - ERS (External Restful Services) - ISE 1.2
- ISE 3.1+
  - API Gateway for routing
  - OpenAPI

# API Services

## API Services Overview:

# ISE API Gateway

- Single access point for routing requests to different nodes
- Eliminates the need to use port 9060 to access the ERS API
- New in ISE 3.1

# API Gateway

## API Gateway Overview:

# Enabling API Services

## API Settings

Overview **API Service Settings** API Gateway Settings

✓ API Service Settings for Administration Node

☒ ERS (Read/Write)

☒ Open API (Read/Write)

✓ CSRF Check ( only for ERS Settings )

☐ Enable CSRF Check for Enhanced Security (Not compatible with pre ISE 2.3 Clients)

☒ Disable CSRF For ERS Request (compatible with ERS clients older than ISE 2.3)

# Authorizing Admin Users

Add an admin user to one of these ERS groups:

The screenshot displays the Cisco ISE Administration console. The top navigation bar includes 'Administration · System' (callout 1) and a menu with 'Deployment', 'Licensing', 'Certificates', 'Logging', 'Maintenance', 'Upgrade', 'Health Checks', 'Backup & Restore', 'Admin Access' (callout 2), and 'Settings'. The left sidebar shows a tree structure with 'Authentication', 'Authorization', 'Administrators' (expanded to show 'Admin Users' and 'Admin Groups' (callout 3)), and 'Settings'. The main content area is titled 'Admin Groups' and features a '+ Add' button (callout 5) along with 'Edit', 'Duplicate', 'Delete', and 'Reset All Ext. groups' options. Below is a table of existing groups:

<input type="checkbox"/>	Name	External Groups Mapped	Description
<input type="checkbox"/>	Customization Admin	0	Access Permission to Guest Menu and Device Portal Manage...
<input type="checkbox"/>	ERS Admin	0	Full access permission to External RESTful Services (ERS) A...
<input type="checkbox"/>	ERS Operator	0	Read-only access permission to the External RESTful Servic...

Callout 4 points to the table of groups.

# Example call

```
~ curl -ku "admin: ;" https://198.18.133.27/api/v1/certs/system-certificate/ise
```

```
{
  "response" : [ {
    "id" : "e5b499ae-78a3-48a3-8287-0cae2b48ebf0",
    "friendlyName" : "CN=ise.abl.ninja#ise.abl.ninja#00004",
    "serialNumberDecimalFormat" : "165045534310020026781750707223",
    "issuedTo" : "ise.abl.ninja",
    "issuedBy" : "ise.abl.ninja",
    "validFrom" : "Wed Apr 20 11:49:03 UTC 2022",
    "expirationDate" : "Fri Apr 19 11:49:03 UTC 2024",

    "keySize" : 4096,
    "groupTag" : "Default Portal Certificate Group",
    "selfSigned" : true,
```

# System Certificates

# System Certificate considerations

- Public PKI
  - Best used for non-corporate devices
  - Short lifetime
  - CA validation means SAN entries often get stripped from CSRs
  - Portal certificates good fit
- Internal PKI (ex: Active Directory Certificate Services)
  - Best used for corporate-managed devices
  - Longer lifetime
  - Unlimited flexibility with certificate design
- Self-signed (no PKI)
  - Limited usefulness, only type that supports renewal

# System Certificates (partial list)

- Admin
  - Internal PKI
  - Good idea to include SAN entries for IP addresses, short names, etc
- Portal
  - Public PKI (short lifetime, SAN entries problematic)
- EAP (used for 802.1x)
  - Internal PKI (longer lifetime, trusted by enrolled devices)
- SAML
  - Use public PKI, must be dedicated certificate
- PxGrid
  - Internal PKI – easier to integrate other services (i.e. firepower)

# Certificate APIs

# Certificate API Taxonomy

- Base path: /api/v1/certs
- Roughly 22 endpoints
- Six Categories of operations
  - Signing requests
  - System certificate ops
  - Trusted certificate ops
  - Regenerate Root CA
  - Bind certificate
  - Renew OSCP certificate

# Accessing the swagger docs

The screenshot displays the Cisco ISE Administration web interface. The left sidebar contains a navigation menu with the following items: Bookmarks, Dashboard, Context Visibility, Operations, Policy, Administration (highlighted with a red arrow and a red circle labeled '1'), Work Centers, and Interactive Features. The main content area has a top navigation bar with tabs: Deployment, Licensing, Certificates, Logging, Maintenance, Upgrade, Health Checks, Backup & Restore, Admin Access, and Settings (highlighted with a red arrow and a red circle labeled '2'). Below the Settings tab, the 'API Settings' page is shown. It has sub-tabs: Overview (selected), API Service Settings, and API Gateway Settings. The 'API Services Overview' section contains text about managing Cisco ISE nodes through ERS and OpenAPI. It includes links for more information on ISE ERS API and ISE Open API. The ISE Open API link is highlighted with a red arrow and a red circle labeled '4'. The 'API Settings' link in the left sidebar is highlighted with a red arrow and a red circle labeled '3'.

## API Settings

Overview API Service Settings API Gateway Settings

### API Services Overview

You can manage Cisco ISE nodes through two sets of API formats—External Restful Services (ERS) and OpenAPI. Starting Cisco ISE Release 3.1, new APIs are available in the OpenAPI format. The ERS and OpenAPI services are HTTPS-only REST APIs that operate over port 443. Currently, ERS APIs also operate over port 9060. However, port 9060 might not be supported for ERS APIs in later Cisco ISE releases. We recommend that you only use port 443 for ERS APIs. Both the API services are disabled by default. Enable the API services by clicking the corresponding toggle buttons in the [API Service Settings](#) tab. To use either API service, you must have the ERS-Admin or ERS-Operator user group assignment.

For more information on ISE ERS API, please visit:  
<https://10.253.68.202/ers/sdk>

For openapi documentation for ERS, click below:

# Use Cases

# Reducing clickOps for fun and profit

- Get the system certificate lists for all nodes
  - Check for expiring certificates
  - Generate certificate signing requests
  - Replace expiring certificates
  - Combine multiple operations into a workflow
  - Export certificates\*
- 
- \*easy, high-impact use case

# The big one...

- What if we could autoenroll with a CA?
- It would help solve some high impact problems
- But it's not trivial to implement...

# Enrollment Protocols

# Automatic Certificate Management Environment

Also known as ACME

- Originally developed for Let's Encrypt
- Gaining traction as an open standard
- Automates processing of Domain Validation certificates
- RFC 8555
- Uses challenge-based authentication
  - “prove to me you control this domain”
- Challenge portion is extensible
  - Currently only DNS-01 and HTTP-01 are widely supported

# ACME

ACME Client

ACME Server

# Simple Certificate Enrollment Protocol

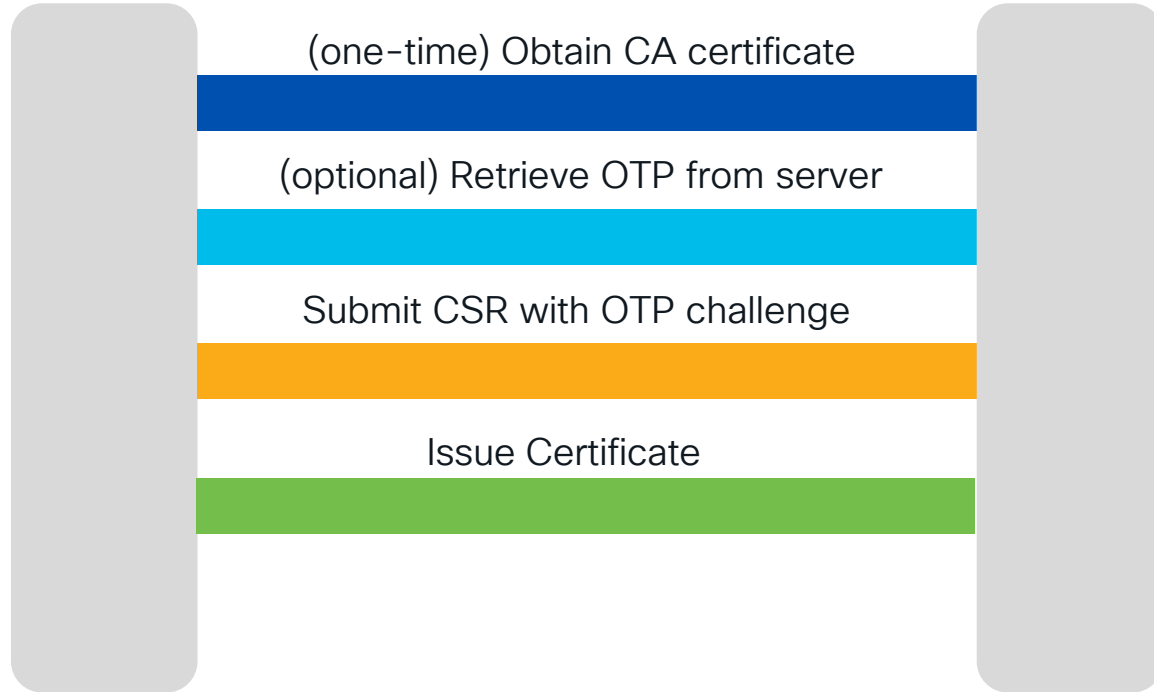

Also known as SCEP

- Developed by Cisco!
- De facto standard for device certificate enrollment
- Uses commands sent as operation= URL parameter
- RFC 8894
- Popularized by the Microsoft NDES service shipping since 2008
- Used by Intune for onboarding Windows devices
- Authentication combination of OTP and PKCS #7 envelope

# SCEP

SCEP Client

SCEP Server

# SCEP vs ACME

Which one do I use?

- ACME is more modern
  - Uses JSON for messaging
  - Private key used to sign CSR is not required to submit request
- Active Directory Certificate Services doesn't support ACME directly
  - But there are proxies available (prepare to get your hands dirty though)
- SCEP is directly supported by ADCS
  - Limitation of one template per NDES server
- SCEP can't use ISE-generated CSRs
  - Do everything outside of ISE and import the cert + private key

# Wait – why use ADCS? Letsencrypt is free!!

- All publicly issued certificates are logged
- Certificate transparency project (for detecting compromised CAs)
- RFC 9162
- Bad idea to use it for internal certificates
  - Allows attackers to enumerate your internal infrastructure
- Have some fun with this: <https://crt.sh/>

# Bottom Line:

- Autoenrollment is not easy
- But it can be done!

# Demo

# Link to the demo source code

# Wrap up

# Key Takeaways

- Understand what you're automating
  - PKI requirements depend on use case
  - Some operations can be service affecting
- Automating enrollment – ACME vs SCEP
  - Each has its tradeoffs
  - Protect the private key
- Resources to develop and test your code
  - Sample code used in this talk:
    - <https://github.com/srmcnutt/devnet-2140>
  - DEVNET sandboxes (search for ISE in the sandbox catalog)

# Complete Your Session Evaluations

Complete a minimum of 4 session surveys and the Overall Event Survey to be entered in a drawing to **win 1 of 5 full conference passes** to Cisco Live 2025.

---

**Earn 100 points** per survey completed and compete on the Cisco Live Challenge leaderboard.

---

Level up and earn **exclusive prizes!**

---

Complete your surveys in the **Cisco Live mobile app**.

# Continue your education

- Visit the Cisco Showcase for related demos
- Book your one-on-one Meet the Engineer meeting
- Attend the interactive education with DevNet, Capture the Flag, and Walk-in Labs
- Visit the On-Demand Library for more sessions at [www.CiscoLive.com/on-demand](https://www.CiscoLive.com/on-demand)
